

WAREHOUSE FORKLIFT FIRE

WASHINGTON, UK – July 23rd, 2019

On July 23rd, 2019, a fire broke out in a warehouse in Washington, UK. As firefighters from Tyne and Wear Fire & Rescue Service tackled the blaze, they realised 2 forklifts were the cause of the fire. The forklifts caught alight by an electrical fault - one was 80% damaged and the other 50%.

From the images below you can see the damaged caused by the smoke, fumes, and fire to not only the forklifts but to the warehouse as well.

Early intervention with the **Bridgehill Forklift Fire Blanket** would have prevented the damaged to the warehouse, contained the smoke and fumes, and isolated the fire to the two forklifts that were ablaze.

Bridgehill also offer Forklift Fire Blankets, Lithium Fire Blankets and Electric Vehicle Fire Blankets for electric/battery operated machinery used in warehouses.
